

## Here's What's New in District of Columbia Truck Trends

Data from the Census Bureau's 1997 Vehicle Inventory and Use Survey are now available for the District of Columbia. This survey produces state and U.S. level statistics on the physical and operational characteristics of the Nation's truck, van, minivan, and sport utility vehicle population.

There were an estimated 33,000 private and commercial trucks registered in the District of Columbia during 1997, up more than 12 percent from the approximately 29,400 trucks registered in 1992.

The survey includes these highlights for the District of Columbia:

The number of sport utility vehicles (SUVs) registered in the District of Columbia during 1997 increased 66.2 percent from 1992. In comparison, the number of minivans increased 53.7 percent and the number of pickups decreased 11.8 percent during this same period.

- Total truck registrations in 1997 included 22.7 percent pickups, 34.2 percent SUVs, and 19.1 percent minivans.
- The District of Columbia has about one pickup for every 71 people and about one SUV for every 47 people. It also has about one pickup for every 47 licensed drivers and about one SUV for every 32 licensed drivers,
- Approximately 4.8 percent of all large trucks carried hazardous materials in 1997.

- About 70.5 percent of all trucks were used for personal transportation, while 28.8 percent were operated for business, including for-hire use.

The report also includes information on fuel efficiency, annual and lifetime mileage, model year, equipment accessories and other data for each kind of registered truck.

The U.S. Summary will be issued in late 1999, following the release of reports for the 50 states and the District of Columbia. This survey is conducted every five years as part of the Economic Census and data are used by government agencies, business, industry, academia, and the general public.

The estimates from the 1997 Vehicle Inventory and Use Survey are subject to sampling and nonsampling error. Sources of nonsampling error include errors of response, non-reporting and coverage. Measures of sampling variability, presented as relative standard errors, are shown in the tables in the report.
